

COURSE DESCRIPTION 科目簡介

COURSES FOR TAUGHT POSTGRADUATE PROGRAMMES

Medium of Instruction: All courses are taught in Cantonese and Putonghua (except for IDE505).

教學語言：所有科目均以中文授課（不包括IDE505）。

IDE501 Microeconomics for Development (3 credits)

This course introduces to the students the microeconomics for development. It also attempts to show what major development challenges people in developing countries are facing and what policies can help address with these challenges.

IDE502 Macroeconomics for Development (3 credits)

This course introduces to students the foundations of macroeconomics for development. It also attempts to show what major development challenges developing countries are facing and what policies may help address these challenges and the reasoning behind them.

IDE503 Development Economics (3 credits)

This course focuses on the empirical analysis in development economics particularly at the micro-level. After acquiring basic research and empirical methods commonly used among economists in the field of development, we will then study the cause of poverty and the path to development at individual, household and local levels. We will do so by examining a number of rigorous empirical studies to answer two sets of questions: 1) what are the institutional, behavioral and information gaps to economic development; and 2) what policy measures can effectively improve the livelihood of the poor.

IDE504 International Trade (3 credits)

This course provides a foundation in international trade, theory and policy. The course aims to explain patterns of world production and trade and ask if international trade is beneficial. This will be done with the help of models from international trade theory that are important components of the toolkit of contemporary trade economists. The course will analyse and compare instruments of trade policy and evaluate their impact on domestic and international welfare. Finally, the course will study the world trading system, including the World Trade Organization (WTO) and international trade agreements.

IDE505 Current Issues in International and Development Economics (3 credits)

The course examines in depth at a selected set of contemporary development issues and challenges. Proposed topics include urbanisation and rising numbers of urban vulnerable; the persistence of chronic, rural and urban poverty, including issues of exclusion linked to ethnicity and gender; the primary of measures to improve skills and health outcomes; government failure, linked to corruption and elite capture; and energy subsidies and pricing policies as well as some current issues related to the Belt and Road Initiative and various Bay Areas. Guest speakers will be invited to deliver lectures on current issues that are related to their respective fields of expertise.

(Medium of Instruction: Chinese supplemented with English)

IDE506 International Money and Finance (3 credits)

Today's financial markets are truly global in nature. No student of economics or finance can

fully understand current developments without some background in international finance. This course attempts to cover the practical issues of international finance and summarises the current literature with only elementary math as a prerequisite. The practical questions include, but not limit to, where to borrow and invest internationally, what different types of international bonds and stocks can be used to raise capital, how exchange rates affect cash flows, what can be done to avoid foreign exchange exposure and risk, and the general financial management problems of doing business in the global environment.

IDE507 Globalisation and Economic Development (3 credits)

The course enables students to understand and critically analyse the essential aspects of the current phase of globalisation both in its real and monetary aspects. In this context, the course focuses on the emergence and the role of international institutions in the regulation of economic relationship between countries. The second part of the course analyses the effects of globalisation on economic development, with particular reference to the institutional dynamics and the distributive conflicts.

IDE508 The World Economy (from Term 2, 2023-24) / China and World Economy (2022-23 or before) (3 credits)

This course explores the major forces and processes that have determined the world economy and its current opportunities and challenges. It begins with an overview of the development of the world economy and its current conditions, treating the world economy as an integrated unit. The course then discusses the performance and experience of major economies or groups of economies, including the US, Europe, newly industrialized economies in East and Southeast Asia, India, the Middle East, Latin America, and Africa. Relevant factors that are important for economic successes and failures in individual economies are investigated, including geography, technology, demography, trade and foreign investment, industrial policies, and macroeconomic policies. Based on these understanding, the course ends with an analysis of the future prospects of the world economy.

IDE509 International Political Economy (3 credits)

The International Political Economy (IPE) offers a multidisciplinary approach to the study of modern society. International Political Economy encourages the integrated analysis of economic problems and issues, using tools and methods of economics, political science, and sociology as informed by an understanding of history and tempered by appreciation of the differences in economic and political systems in the world. This course introduces three standard perspectives in International Political Economy and thus offers such a broad and critical vision to look at the world and to understand current issues.

IDE510 The Belt and Road Initiative: History, Politics, Economy and Society (3 credits)

This course offers an introduction to the Silk Road as a driving force in history through its role as a facilitator of cross-cultural, social and political contacts. It first discusses the large number of different stakeholders interested in the historical Silk Road. The second part of this course focuses on the up-to-date issues and current developments related to the Belt and Road Initiative and its impact on different countries. For example, the implications and opportunities for the Belt and Road Initiative in ASEAN, Central Asia, Eastern Europe and other regions. An additional operative lens with particular relevance to the rapid growth of management practices in regional and global economic integration. In the end the course discusses some possibilities and challenges in the investment of the Belt and Road Initiative and students are required to work as a team to take the project from the first idea to its possible execution.

IDE511 Chinese Economic Development (from Term 2, 2021-22) / China's Regional Economic Development (in Term 1, 2021-22 or before) (3 credits)

This course aims to help students analyse and understand the transition and development of the Chinese economy since 1979. Specific topics include but are not limited to the economic reform, open-door policy, regional development, economic growth, financial market, innovation, international trade, foreign direct investment, exchange rate, and other contemporary economic issues. The course will discuss both the achievements of the economy and the current problems and challenges it faces. We will introduce some basic knowledge of microeconomics, macroeconomics, international economics, and statistics as the basis for systematic analysis of Chinese economic development in the past, present and future.

IDE512 Political Economy of Economic Development (3 credits)

This course provides an introduction to contemporary research on the political economy of development. The major questions to be addressed by the course are: How central is politics to economic development? How do political institutions determine policy choices? How do economic structures in turn impact on politics? Why do governments employ policies that hinder development?

IDE513 Environmental Issues and Sustainable Development (3 credits)

The course applies economic analysis to environmental issues and sustainable development. The market-oriented approach to environmental policy making will be evaluated with the regulation-planning approach. Approaches to green economic growth will be examined. This course requires a basic knowledge of microeconomics.

IDE514 Globalisation and Economic Integration (3 credits)

This course aims to familiarise students with the cause, pattern, and nature of the globalisation of production of goods and services, which are taking the form of greater division of labor, increasing specialisation, greater trade and capital flows, and keener international competition. Against this trend, however, is the emergence of trade blocs and regional economic entities. This course will look at the interaction between these two trends. Students will also have the chance to examine the roles of World Trade Organisation (WTO), the World Bank, the International Monetary Fund (IMF), and the impact of globalisation on financial stability through the study of the East Asian Financial Crisis and the recent Financial Tsunami.

IDE515 Research Methods (3 credits)

The course is designed to lay the foundations for research in economics or for work as a professional economist. The course covers different aspects of the research toolbox of modern economists. The course will provide an overview of the important concepts of research design, data collection, statistical and interpretative analysis, and final report presentation. Through attending seminars, reading the literature and writing assignments, students will gain exposure to different research methodologies used in economics. Students will learn how to synthesise and critique research on a particular topic by reading academic papers and/or research reports from government and non-governmental agencies. Last, students will develop their academic skills and empirical econometric skills towards independent economic research, and improve their writing skills in presenting research to a wide variety of audiences.

IDE516 Financial Econometrics I (3 credits)

This course provides students an introduction to the principles of econometric analysis. The course equips students with appropriate econometrics techniques and software skills for doing empirical research in economics and finance. The emphasis of this course will be on developing and applying regression techniques in cross-sectional contexts.

IDE517 Financial Econometrics II (3 credits)

This course mainly covers time series modeling, panel data analysis and limited dependent variable models. The course focuses on theoretical underpinnings of the relevant estimation and inferences. It also includes a hands-on component where students will apply various techniques discussed in class to financial time series and panel data.

IDE 518 Industrial Economics and Policy (3 credits)

This course provides an introduction to current theory in Industrial economics. It starts by examining the internal structure of firms. It then moves on to the analysis of various aspects of strategic interaction between firms and the determinants of industrial structure. Finally, it discusses the role of policy in the context of competition and industrial policies and regulation. The emphasis will be throughout on understanding how the theoretical tools can be used to analyse real world issues.
